

Marina de Portimão® Environmental Policy

Marina de Portimão®, located at one of the safest nautical destinations in Portugal and nestled in the Arade River estuary, an ecosystem with unique biodiversity in the region, has the main objective of guaranteeing an environmentally sustainable and personalized high-quality service to its clients, users, and partners, making their experience as memorable and environmentally responsible as possible.

Thus, its strategic promotion and development plan incorporates a daily concern for the environmental preservation of the fauna and flora of the ecosystem in which it is located, in a perfect relationship between our greatest resource, water and the sea.

It is in this way that, through the Environmental Policy of Marina de Portimão®, we assume our commitment to work increasingly and better, together with the entire community, to prevent all forms of pollution, to safeguard the rational use of water and other energy resources, to involve the entire community, clients, partners, and employees, in the adoption of good environmental preservation practices, to comply with the environmental requirements and legislation in force, and finally to establish procedures and instructions to monitor the best environmental performance.

It is through small daily gestures, close to optimized and environmentally responsible management, that monitors and implements measures that minimize significant impacts on the environment, that we can safeguard a better environment for all, reduce the ecological footprint, and preserve vital resources for future generations.
